

Description of the Drawings at page 6, line 29.

Applicant does not believe that a new CRF, hard copy of the sequence listing, and statement under 37 CFR 1.821(f) are required because no change is made to the sequence listing by the present amendment.

The Examiner is requested to contact the representative of the Applicant at the number listed below with any questions or for clarification.

No further fee is believed necessary. However, should any further fee be required, please charge our Deposit Account No. 09-1962.

Respectfully submitted,

APPENDIX A

MARKED-UP VERSION SHOWING CHANGES MADE TO THE SPECIFICATION

Figure 2 illustrates the determination of the transcription start site of the CsVMV promoter as described in Example 2. Primer extension reactions were carried out as described and the products of the extension reactions obtained with two annealing temperature (30°C and 40°C) and reference sequencing reactions of CVP1-uidA gene construct (lane A, C, G and T) performed with the same labeled primer, were subjected to electrophoresis in a 7M urea, 7.5 % polyacrylamide gel. The plus strand DNA sequence (complementary to the sequence read on the gel) is shown (nucleotides 441 to 453 of SEQ ID NO:2) and the transcription start site (A*) is indicated by an arrow at nucleotide number (nt.) 7604. Numbers correspond to the nucleotide sequence numbers of the CsVMV genome, Calvert et al, J Gen Virol, 76:1271-1276, 1995.
